

Web Server

Goal

To provide System Administrators and Installers with an understanding of security permissions and installations for the Application Server and Web Server to support Web Client installations.

Course Description

The Web Server class teaches you the advantages of separating the application server from the web server as well as how to administer, troubleshoot, and install the OnBase Web Server. Installation includes configuring user accounts and application pools as well as methods to secure the web server.

Topics Covered

- Web & Application Server architecture
- Communication methods
- Installation Usage
- Web Server
- Security Requirements & Installation
- StatusView

Certifications

This course does not fulfill the requirements for any certification.

Measurement

Students will install and troubleshoot a Web Server installation.

Prerequisites

- ▶ **For OnBase System Administration:** System Administration
- ▶ **For OnBase Partners:** Introduction to Installation course
